**Albeo™ LED Luminaire**

Heavy Industrial High Bay Lighting
(AHH1-Series Hazardous)

**Features**
- UL 1598 Suitable for Wet Locations
- IP66 Rated Ingress Protection
- UL 844 Class I Division 2
- CSA C22.2 No.137

---

**BEFORE YOU BEGIN**

Read these instructions completely and carefully.

### WARNING/AVERTISSEMENT

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. CAN ICES-005 (A) / NMB-005 (A)

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

**Save These Instructions**

Use only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.

**Prepare Electrical Wiring**

**Electrical Requirements**

The LED driver must be supplied with 120-277 VAC or 347/480 VAC, 50/60 Hz per product label and connected to an individual properly grounded branch circuit, protected by a 15 or 20 ampere circuit breaker.

**Grounding Instructions**

The grounding and bonding of the overall system shall be done in accordance with National Electric Code (NEC) Article 600 and local codes.
Unit Installation

Provide at least 12" of clearance from the top of the fixture to any ceiling or surface above.

1. Carefully unpack unit and properly inspect for defects before installing. Wear work gloves to prevent dirt and oil from being transferred to the luminaire.

2. Pendant mount.

   **Fixture Weight**

</tbody>
</table>

**NOTE:** The standard configuration uses a 3-conductor SOOW cable. The dimming option adds a separate 2-conductor SOOW cable for 0-10V control wires.

**NOTE:** For applications requiring the “R” corrosion resistant finish use mounting hardware appropriate for the environment.

**Pendant Mounting**

1. Attach pendant mount box to ¾” NPT conduit. Determine rotation of fixture and lock orientation in place with provided set screw.

2. Lift fixture up and hang on pendant mount box using hinge piece.

3. Feed the AC power cord through the conduit and into the junction box.

4. Swing fixture closed and secure with the slide clip. Lock slide clip in place with screw.

5. Connect the green (ground), black (line) and white (neutral) wires of the AC line to the similarly colored wires of the fixture’s power cord using UL listed wire connectors. Close junction box.
Optional Installation: 0-10V Volt Dimming

The 0-10V dimming option uses a separate 2-conductor SOOW cable. Install cable per NEC and local codes. A 10V signal corresponds to 100% lumen output. A 0V signal corresponds to ~15% lumen output. Shorting the dimming wires dims the fixture to ~15% lumen output.

Troubleshooting

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Solution</th>
</tr>
</thead>
</table>
| Luminaire will not turn on. | • Check that the color of the supply side wires match the color of the wires they are connected to.  
                                 • Check that all wire connectors are properly connected.  
                                 • Verify that your input voltage is within specs.  
                                 • If you are using any additional controls (i.e. dimming wires, motion sensors), please also verify that those are working properly and that the unit is setup to interface with the controllers. |

Maintenance

• Product should not be disassembled during installation process and/or while installed.
• Lens should be cleaned periodically for maximum lumen output.
• Inspect and clear any build-up on cooling fins periodically for maximum performance.
